**FYI:** We cut only 3/16" Pyroceram III, the latest generation of hearth window designed to withstand temperatures of up to 1300° F. We have many of the most popular sizes and templates in stock. You may call in any rectangular size or mail a template of any we do not have. *A fax does not keep the true size.* To figure pricing for custom cut glass, figure to the next full inch increment.

For example:

6.5" by 9.75" = 7" x 10" or 70 sq. in.

**We try to ship all glass within 24 hours.**

**FYI:** The country of India is the only source of mica used to make windows for stoves. It is very difficult to get mica in large sizes without black spots formed by Mother Nature. If you need sizes not listed, please call for price and availability. The thickness on all sizes listed is .003/.005.

MH6R

For many older stoves, the Miracle Heat is the best way to add a blower. The thermostatically controlled 100 CFM fan extracts and distributes the proper amount of heat without cooling the flue too rapidly. It's eight-foot grounded power cord provides ample length to reach the nearest electrical outlet.
